

SolutionVue™

Expertise at Your Fingertips

SolutionVue™ is the easiest and most comprehensive online engineering platform that can be utilized to create a cybersecurity solution that protects your business. In under 20 minutes, your organization's best course of action can be determined and a prioritized action plan that includes supplier recommendations, education, and quantified business risk is created.

Depth

SolutionVue™ Quick Solution Assessments (QSA) are comprehensive, easy to complete, and offer a seamless experience that can be walked through in one session.

Customized Output

SolutionVue™ takes a 3-dimensional view of solution architecture. The focus of this tool is the "What to do, why to do it, and in what order" items should be constructed. While vendor recommendations are offered and updated monthly, the focus of the tool is maximizing your finite budget to address the most important elements first.

Timely and Useful

Unlike other online engineering platforms, there isn't a wait for the final output. Moments after completing the QSA you will have a tangible document to review and socialize with your team. This cuts down on the time needed to make decisions that can protect your business.

QSA Summary

In many cases, a follow-up conversation may occur once the output from the QSA has been reviewed. To assist further conversations, the last 3 pages of the QSA catalog holds all the inputs gathered during our conversation so that they can be used to clarify specific technical points.

Did you know that over 40% of SMBs do not have the proper cybersecurity plan in place to combat cyberattacks?

The Global average cost of a data breach is \$3.9 million across SMBs

By some counts, there are more than 2,200 cyberattacks per day. That equates to about one cyber-attack every 39 seconds.

Schedule a call today and let's architect the best security solution for your business!
